

Great Falls Public Schools Good Apple Award Recipients

Tom Hering, Director of Information Technology, Bob McGregor, Supervisor of Data Center, Drew O'Connell, Server Systems Engineer, Dan Sibert, Technology Architect, Patrick Douglas, Kim Krattiger, David Myles and Mike Ward, Core Support Technicians and Sarah Bouchard, Jordon Falkenhagen, Orië Fischer, Glen Kimball, Mark Miller, and Andrew Stelling, Tech Support Technicians, District-wide, were recommended for a Good Apple award by Tammy L. Lacey, Superintendent, District Office Building, because of the following: Recently, Great Falls Public Schools' Technology Department installed a new district-wide phone system. This was the largest IT project within the last five years with 1375 phones being installed in 23 locations. Equipment was installed in every site to include E911 capability to identify the nearest external building door to the caller. In addition to equipment installation, the District Office Building was completely re-wired to support the new system. To ensure this project ran smoothly, thirty seven project management/planning sessions were held. The entire project was executed efficiently and effectively thanks to the team members noted above. Each played an important part in this vital project. I would like to give special acknowledgement to Bob McGregor and Patrick Douglas whose careful planning, coordination, and execution, ensured the project's success. Please extend these employees this small token of thanks for their attention to detail and their commitment to high quality work.
